Abstract of EP 0095633 (A1)

Flexible mounting for the forward end (2) of a vehicle cab (1), in particular of commercial vehicles, by means of a torsion bar (14) as a spring element which is coaxially inserted into a transversely running support pipe (5) which is mounted on the vehicle frame (4) so as to swivel about a vehicle transverse axis (22) and to which the vehicle cab (1) is fixed by means of support arms (10, 11), the torsion rod spring (14) being attached by one end (16) in the support pipe (5) and by the other end (18) on the vehicle frame (4) with pretensioning, and in that shock absorbers (20, 21) acting parallel to the torsion rod spring (14) are connected in jointed fashion by one end to the vehicle cab (1) and by the other end to the support pipe (5) or to the vehicle frame (4).
